Very near to Alvor you can enjoy one of the best motor race circuits in Europe - AIA - Autódromo Internacional do Algarve.

Designed to be one of the best and most modern circuits in Europe, it has 64 different layouts and is FIA and FIM approved. State-of-the-art facilities together with an amazing track make the AIA one of the best circuits in the world.

Designed to be one of the best and most modern circuits in Europe, the Autódromo Internacional do Algarve will benefit from the best conditions of safety and comfort both for drivers and the public.

The natural relief of the terrain enabled the creation of a unique circuit, with accentuated undulations, making driving a pleasure, since the curves and straights follow each other at an exciting rhythm with accentuated declines. For the public this characteristic will be spectacular, allowing a wide view from any stand.

This view is increased by several giant tv screens. It is noteworthy that the location of the various stands was carefully chosen in order to assure close proximity of the public to the circuit and to the action.

High-end Technology

The circuit will also have a system of rain simulation, through an asphalt watering system, automatically controlled by an advanced software system which will permit variation in the amount of water injected onto the track.

The concept of the modern Autodrome favours a careful relationship with the environmental and topographical characteristics of the location, as well as the close relationship of the spectator with the events and scenery. Aside from the infrastructures necessary for sports use, there will also be leisure areas and entertainment for the public.
